11/08/2017 - Spahr Library
- Discussed our gameplan for project 4. Ultimately decided to focus on maps and gps first before worrying about the other features; this one is the most important.
- Started to seed our database with initial values. We added a list of buildings on KU campus to our seeds.rb file.

11/10/2017 - Eaton 2
- Figured out how to get Google Maps API working in rails. Still a lot to do with maps. Ideally we want pins which users can click on and be redirected to that page for that building. And it turns out, that is possible.

11/13/2017 - Eaton 2
- Map integration is almost done, just a few issues to settle out with pins and queries, which requires us to modify our database structure to include latitude and longitude of each building in our database.
- Edited our restroom gender options to be checkboxes instead of an input field.

11/15/2017 - Eaton 2
- Fixed a few bugs that happened when we changed validation.
- Discussed some issues with Google Maps integration, ultimately decided to use a Ruby Gem which takes care of a lot of the problems we're having. Good thing we found it.
- Cleaned up seeds.rb a bit. Looks a lot better now.

11/21/2017 - LEEP2
- Started work on map integration.
- Refactored some old code to be extensible, before moving on

11/22/2017 - Eaton 2
- Slightly redid our database structure, to keep track of user preferences.
- Decided to just chill over Thanksgiving Break; we feel that the project is in a good place (also we're busy)

11/27/2017 - Eaton 2
- Finalized geocoding
- Began work on search functionality
- Had some issues with API keys, got them mostly resolved. It had to do with environment variables.
- Started styling all the new stuff.

11/28/2017 - LEEP2
- As of right now, this is our to-do list: bathroom features, form validation, and a test suite.
- Added gender to users.
- Some more styling with the maps. Should properly work on mobile (hopefully)

11/29/2017 - Eaton 2
- Styled map to proper format
- Added additional validation and fixed a bug with error showing up in multiple spots
- Started work on our test suite - it shouldn't be that large with our project, since we have very few complete, custom methods.
- Added a search bar to the home page.

11/30/2017 - LEEP2
- Added tags

- Fixed about 10 bugs
- Validated everything
- Added comments and documentation
- Added Favicon
- Added SeatSeek
- Got Maps Working!
- Reworked routing structure
- Cranked out the rest of the project
- Deployed to Heroku
- App is live at seat-critique.gitgud-.ku.com
